

Quick info for persons affected

Cancer Treatment with the Dendritic Cell Therapy Treatment Concept 'DKZplus' of IMMUMEDIC

The Dendritic Cell Therapy (general: DC) of company IMMUMEDIC is a personalised, laboratory-manufactured medical therapy method for cancer patients. DC is the main module of the treatment concept 'DKZplus' and is, as being the treatment module 'DCs', the main component for therapy concepts which will be individually combined by doctors/physicians.

Increasingly orthodox medical practitioners offer the DC-therapy 'DCs' as a very sensible accompanying measure for to reduce the mostly harmful side effects, happening at treatment with traditional therapies. In addition to that also another strong therapeutic effect emerges when fighting against the tumour cells.

Independently applied the DC therapy is a high effective and absolute sparing treatment method with very high chances for healing the cancer. So with this treatment method, offered by IMMUMEDIC, it is not necessary to make an operative extraction of tumour cells – a surgery which is being critically rated. Beside of still existing diagnosis methods the removal of cells only serves the need for addressing of DC-cells – and exactly that, to address and train the autologous, matured Dendritic Cells will be made at IMMUMEDIC with autologous cells directly and absolute genetically out of the patient's blood – means, without a surgical intervention!

The efficiency of a treatment with Dendritic Cells has been proved for renal carcinoma, breast cancer, B-cell lymphoma, myeloma, prostate carcinoma, colon carcinoma, ovarian carcinoma, cerebral tumours (brain) etc. There are approx. 200 different types of cancer. Basically all of them can be treated with the Dendritic Cell Therapy (DCs). For that please consult your doctor / physician. The treatment with DCs has been proved by different scientific studies and is a regular feature of the private medicine for 14 years now.

For private patients it is advantageous along a wide front to get such a therapy by an ambulant treatment at the practice of your trusted doctor/physician with the help of IMMUMEDIC. Your doctor/physician will be informed comprehensively by IMMUMEDIC about the therapy with documents, expert information and in professional dialogues by telephone. As an alternative IMMUMEDIC also can name you doctors/physician who would accomplish the therapy with you willingly.

An intensive support for the clients of IMMUMEDIC, as patients of their doctors/physicians, is an experienced part of the programme. The organizing of the activity flow in front of and during the therapy esp. the appointments (doctor's / laboratory / logistics) shows the strength of IMMUMEDIC as an international medical service company.

For not stopping your doctor/physician from doing his main job, IMMUMEDIC takes over the executive jobs like taking care of: The treatment contract with the patient, (where necessary) the preparation of an offer for a private health insurance, organisation of the cost management, a strict obedience of the time schedule, a smooth run of the logistics between the doctor's practice and the laboratory, the extensive laboratory work and finally of the quality control and the documentation acc. to GMP.

All those who have focused their attention to a genuine biological cancer therapy, have found it now with the therapy concept 'DKZplus', offered by IMMUMEDIC.

So the manufacturing of the Dendritic Cells (DC) happens in a specialised laboratory exclusively from the body's own blood of the patient – means, it is 100 % autologous. By that medicals of any kind have no place in relation to the Dendritic Cell Therapy of IMMUMEDIC. This kind of a biological immune therapy works on a direct way with the own cells, quickly and effectively, and with the own information of the body about his present state. Consequently a drug administration for to activate and, lifelong (!), for to retain a treatment function can fall out completely. At the Dendritic Cell Therapies of IMMUMEDIC ('DKZplus' and 'DCs') the available action of the treated cells will sensitise, via lymph system, the immune system very quickly. Antibodies will be generated in the way like it works with vaccines for other known diseases, e.g. measles, rubella, mumps etc.

Named as therapy concept 'DKZplus' the Dendritic Cell Therapy 'DCs', with its 4 scheduled cycles by one application each out of 2 injections (subcutaneous right/left into the crotch), is now combined with additional 10 applications (s.c./i.m. injection) for to redevelop the immune system and to repair damaged cells of the DNA. This cure has to take place in a strict time schedule within 46 days.

At the very beginning of the therapy and after about 5 months a) an EDIM blood test takes place for to get a high sensible detection of the tumour state and b) an analysis for to detect the vitamin- and mineral status. The patient will be delivered with concerted vitamins and minerals (for oral intake) by IMMUMEDIC over a period of 6 months for to ensure an administration.

Summarized it can be assessed that a patient will get with the 'DKZplus' therapy concept:

- 4 Applications with 2 injections each 'Dendritic Cell Therapy – DCs'
- 10 Applications with 1 injection each 'ImmuSeroForte' for to redevelop the immune system and to repair damaged cells of the DNA
- 2 'EDIM blood tests'-for to detect the tumour status associated with the analysis for to check the vitamin- and mineral status

Further information about our therapy concept 'DKZplus' and the therapy module 'DCs' you will find in various columns on the IMMUMEDIC homepage and in the 'Patient Information' which can be easily requested:
