

Quick info for persons affected

## Therapy with ImmuSeroForte of IMMUMEDIC at incurable cancer and autoimmune disease

---

Especially for a biological, means a not medicamentous immune therapy this biological injection serum with 'body-known' proteins (HSP) is made.

The presented proteins constitute the integral component of the immune reactions of the human body against cancer.

The injection serum 'ImmuSeroForte' consists of a) a fraction out of cell ingredients, dissolved in a cell culture medium, b) Cytosol, which in turn consists up to one third out of proteins, being the most important ingredients for structure and function of each cell.

Primarily ImmuSeroForte of IMMUMEDIC is offered additionally to a Dendritic Cell Therapy. As accompanying measures there can be named:

- Releasing the blood vessels of deposits
- Reducing the blood lipids and its protein compounds
- Curbing inflammation activities
- Regulating the blood pressure
- Supplying of oxygen and stabilising the immune system

ImmuSeroForte holds the abilities:

- to add the missing messengers to the DNA with its heat shock proteins (HSP)
- to support the repair mechanisms of already damaged cell structures in addition to the conservation of cell function and cell vitality.
- that the structure of the DNA, which is damaged by incurable cancer or autoimmune diseases, will be repaired – a cell renewal will occur

Clinical and pre-clinical studies have given the evidence of stimulating the following mechanisms:

- Natural destruction of virus-infected or pathologically growing cells (apoptosis)
- Preventing the metastasis of tumour cells
- Destruction of fungi, viruses and virus-infected cells
- Regulation of allergic and auto-reactive processes

An optimal medication for a cell treatment with 10 single applications extends over 46 days. The injection with a single dose of 2 ml has to happen subcutaneously or intramuscularly.

ImmuSeroForte has an approval as a pharmaceutical (class 1) and maintains a low profile (means, it is inconspicuous) in case of side-effects, contraindications and incompatibilities.

For the attending doctors/physicians there are detailed product information available.
